CHAPTER V

COVER

5.1 Conclusion

Based on the discussion in the previous chapters on research on JnFashion Store, the author can draw the following conclusion:

1. Web-based sales information system is expected to be implemented as a media campaign as well as facilitate transactions in JnFashion Store.

2. Web-based sales information system has features to computerized data processing and display and print reports.

3. Web-based sales information system created with desktop base after testing can also be accessed online through the android.

5.2 Suggestion

In the manufacture of web-based sales information system on JnFashion Store is still much that can be developed for future research, such as:

1. Website development becomes more dynamic on the checkout page of goods, ie the customer can write certain notes in order.

2. Extra features that directly connects to the king postage transactions so that customers can choose the desired delivery services ..

3. Extra features discount to customers who have become members in adding to the allure customer to make a purchase on the website.

Similarly, the advice can be given, hopefully these suggestions can be used as a useful input to the next research.
