DECLARATION

I, the undersigned below, state that, this thesis is my own work (ORIGINAL) and the contents of this thesis have never been applied by any other person to receive an academic degree at a certain education institution, and as far as I know, there are no works or thoughts which have been written and/or published by anyone, except those in writing which are listed in this manuscript and which are mentioned in the reference list.

Anything that applies to the manuscripts and works that have been made is my own responsibility.

DEDICATION

Praise Allah SWT, for the grace of a great deal of mercy and His goodness, so that the author can complete the study entitled A Comparison Study of Model Based Collaborative Filtering using Alternating Least Squares and Singular Value Decomposition. Appreciation and gratitude give to :

1. The author's parents, who has been raised and educated, as well as provide support and prayers to the author.
2. The author's brothers, who has been supported to the author.
3. The author's close friends Bayu and Adit who have accompanied me in joy and sorrow and always being the author's partner during college.
4. the authors research partner Nisah, Yahya, Visq, Ibam, Nurma, Christy, Arya, Erick, Anang, Fayami, Nur Hidayah, Wahidin and Dimas.
5. CEO of Binar Academy Ms. Alamandas, who has become my game changer.
6. The authors himself.

ACKNOWLEDGEMENTS

Praise and deep gratitude to Allah SWT for the profusion of grace, and guidance of Him given to the writer that made the undergraduate thesis could be complete. Greetings and sholawah might always be devoted to the prophet of Muhammad SAW. The undergraduate thesis entitled A Comparison Study of Model Based Collaborative Filtering using Alternating Least Squares and Singular Value Decomposition, it is designed to fulfill the undergraduate program (S1) in the Study Program of Informatika, Faculty of Computer Science, Universitas AMIKOM Yogyakarta. The author would like to thank you profusely for all the help that has been given, either directly or indirectly, to complete this final undergraduate thesis during the preparation process. In particular gratitude that are due to:

1. Prof. Dr. M. Suyanto, M.M As Rector of Universitas AMIKOM Yogyakarta
2. Mr. Hanif Al Fatta, M.Kom. As Dean of Faculty of Computer Science Universitas AMIKOM Yogyakarta
3. Mrs. Windha Mega Pradnya Duhita, M.Kom, As Head of Study program S1 Informatika Universitas AMIKOM Yogyakarta
4. Mrs. Hartatik S.T., M.Cs. As the author thesis preparation who guidance and encouragement in the preparation of this thesis.
5. The entire teaching staff of the Study Program of Informatika Universitas AMIKOM Yogyakarta has guide me with the knowledge.
6. Big family of FORUM ASISTEN Universitas AMIKOM Yogyakarta which give the authors joy during lectures.

7. Family BCI 01 class of 2017 which give the authors happiness for three years
8. All the parties who could not have been listed one by one by the author, who contributed a lot of support to complete this study.

The authors concluded that this work has not been flawless, either in terms of content or presentation. Ideas and positive suggestion are expected at the conclusion of this thesis. Recently, the writers hope that this research will offer valuable things to the reader and, in particular, to the researcher.

ABSTRACT

Recommender systems are systems that are built to recommend items to users based on a variety of criteria. These systems predict the most likely product that users are likely to buy and are interested in. The most commonly used in recommender system is collaborative filtering.

In this research, the author proposes to determine the quality of recommender system by comparing model based collaborative filtering techniques, i.e Alternating Least Squares and Singular Value Decomposition with three different characteristics dataset.

The result of this study shown Model Based Collaborative Filtering (Alternating Least Squares and Singular Value Decomposition) able to improve the quality of recommender system by considering the hyperparameter tuning result. Overall Alternating Least Squares performs slightly better than Singular Value Decomposition in movielens and jester dataset.

Keywords : *Alternating Least Squares, Singular Value Decomposition, Model Based, Recommender System, Collaborative Filtering*
