

Because of that, we make multitouch device to answer the society demand in general and company. The demand is about computer device which is intuitive and attractive and also able to handle multiuser in same device at affordable price, and it is available in the Indonesia market for the first time.

Besides for tourism information, the multitouch system is also suitable for school, office, developer, hotel & resort, shop, etc., which need more interesting device, and the device can attract user both to learning and for exploring process.

## Introduction

TIWULE stands for Touch It with Ultimate Learning Experience. TIWULE is the brand name of a multitouch project produced by Innovation Center AMIKOM. This device will help people to interact with digital content in a simple and intuitive way. It is simple because the device designed as a simple large, horizontal table without any other input device. It is intuitive because users don't need to use indirect input device such as mouse, keyboard, etc to interact with the device.

User only must touch the table surface by their fingers to give input to the system. In addition, TIWULE offers a unique gathering place where multiple users can collaboratively and simultaneously interact with data and interact each other.
