

CHAPTER V

CONCLUDE

5.1 Conclusion

Based on the explanation that has been described in previous chapters, the conclusions that can be drawn in this thesis report are:

1. Made a menu ordering system at ronalee restaurant by making use case diagrams, activity diagrams, sequence diagrams.
2. Made a database.
3. Changed the system programming language from PHP to Node.js.
4. Added socket.io library to the system so that the process of input and output of the system occurs in real time so that data loss does not occur.

5.2 Suggestion

Suggestions that can be used as a reference in developing this application in the future, include:

1. Add features that can calculate income and expenses at RonaleeResto.
2. Making the Application can be used by customers who can simultaneously accommodate orders online and can prevent fake orders.
3. The application is integrated with the stock of materials in the warehouse, so that if there are orders that are cooked then the stock will automatically be reduced.
