

## CHAPTER V

### CLOSING

#### 5.1 Conclusion

From the results of the research that has been carried out by the author, the following conclusions can be drawn:

1. This research produced an animated video with a duration of 2 minutes.
2. Information needs related to the animated video have been met.
3. The process in making this animation video goes through several stages.
4. These include data collection, asset requirement analysis, production process, and evaluation.
5. For the creation of 2D animation using *Frame by Frame* techniques.
6. In testing all functional requirements have been successfully carried out. In beta testing, the results were obtained in the "Very Good" category.

#### 1.2 Advice

This research is not free from shortcomings and mistakes both intentional and unintentional. For this reason, the author hopes that in the future this research can be developed both in terms of research methods and the final product. The suggestions that the author will give are as follows:

1. Understand each function of the tools in the *software* used to facilitate the animation production process.
2. Maximize the application of the 12 animation principles so that the movements made look smoother and does not look stiff.

3. Learn more about backgrounds for more scenes variants.
