CHAPTER V

CLOSING

5.1 Conclusion

Based on what have been written from all the previous chapters in "Analysist and Design of Information System Web Based Room Reservation At Kost Pelangi Balikpapan", the writter can produce some conclussion as the following:

1. The creation of Information System at Kost Pelangi Balikpapan can be done by analyzing the weakness and strength of the system that is currently in use.

2. The development of the Information System at Kost Pelangi Balikpapan can be done using PHP, HTML, and CSS programming language.

3. With the existance of this information system, Kost Pelangi Balikpapan can experiment with the system to attract and pull potential customer and even potential business partner.

4. Potential customer can interact with the system to know about Kost Pelangi Balikpapan in detail without having to be at the location, so that it will save time for them.

5. The Kost News feature can help customers that are already living at the Kost Pelangi Balikpapan that did not receive the news directly and also will help potential customer to see the advantage of Kost Pelangi Balikpapan.

5.2 Suggestions

In the development of the Information System of Kost Pelangi Balikpapan, there are more features that can be implemented to the system in the coming future, such as:

1. Payment Gateway that can be integrated directly at the system to ease the transaction digitally.

2. The monetary system can be combined with the accounting system to observe the cashflow of Kost Pelangi Balikpapan.

3. Stronger security system to protect the entirety of the system from unwanted disturbance, such as keeping the system from spams or brute force hacking.

4. A membership system that is more advanced to grade customer or visitors so that they can get a bonus for renting a room at Kost Pelangi Balikpapan to improve the rate for returning customer.
