CHAPTER V

CLOSING

5.1 Conclusion

From the results of research conducted at the store Badrun Camera Bags Junior showed that the management of sales information data is still lacking and inadequate and slow in sales for the transaction from the customer to the seller. So as to obtain information data difficult to manage and slow transactions. Therefore, the authors try to design a sales website as a medium of computerized sales information so that the data information required and maintained by the owner can be processed easily and make it easier for customers to conduct transactions. The following are some of the benefits obtained from the Website Badrun Camera Bag Junior:

1. Customers can make purchases or reservations at any time.

2. Help direct the customer to conduct transactions purchase or reservations.

3. Customers do not have to wait long to find out the ordering process.

4. Do not have a time limit for reservations pelangga not need to wait for a response from the seller or owner.

5. The ease of data management of sales and customer information and transaction information data that is not vulnerable missing.

5.2   Suggestion

In this research, there are still many many shortcomings, in terms of writing the script as well as the manufacture of the system. So for further research are expected to develop better. Based on the conclusions outlined above, the suggestion author wanted to convey is:

1. Application of this website will run smoothly if the store can understand when training website has been created.

2. The system can be developed with the method of payment such as payment gateway.

Similarly, conclusions and suggestions to the author to convey. The author hopes that the proposed new system can help the shop owner to facilitate transactions sales against. The author also hopes that the new system is applicable and beneficial to the store owner.
