“We shall grow in the esteem of future generations”

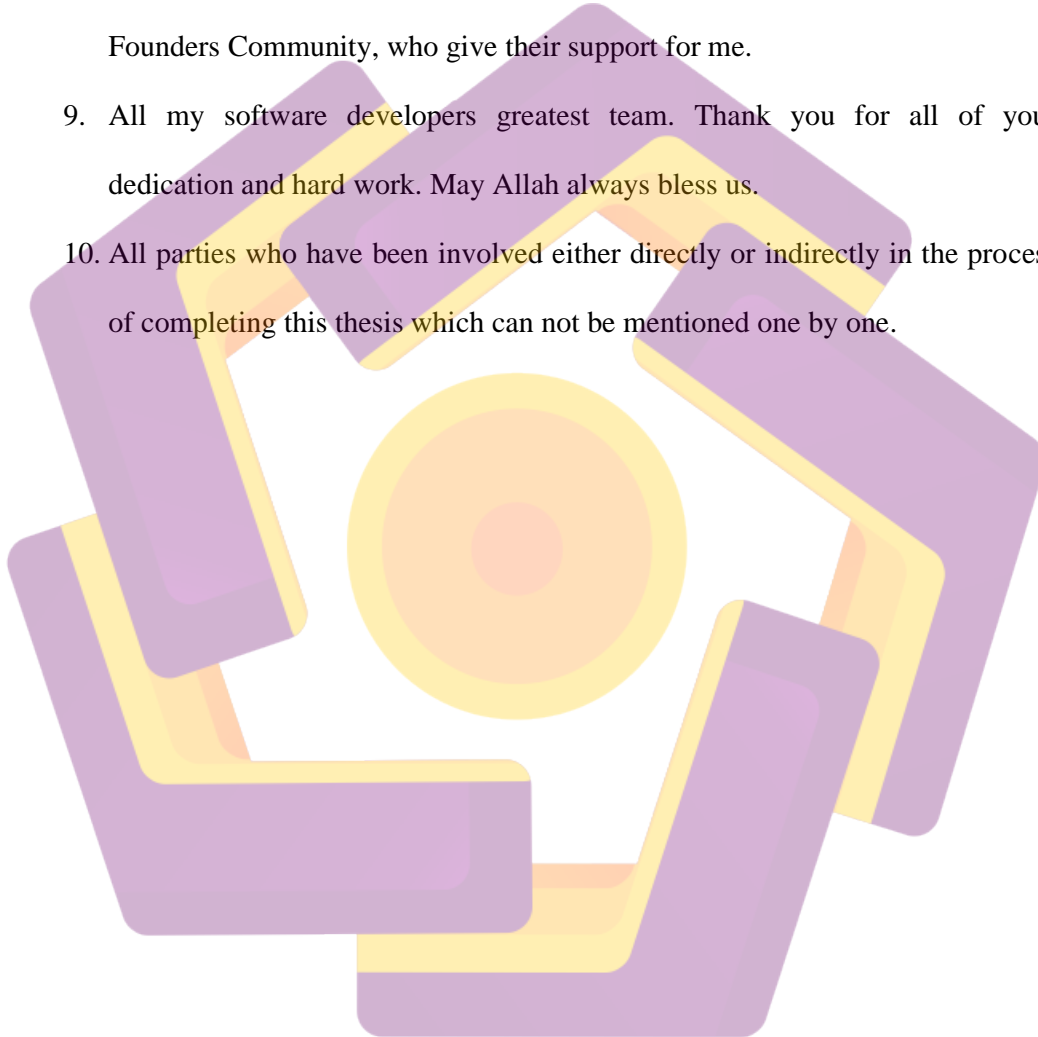

DEDICATION

Bismillah hirrahman nirrahim, Alhamdulillahirrabil'alamin, thanks to Allah SWT who has given me grace, guidance, health, and ability, so I can finish this bachelor thesis. On this presentation page, I would like to say many thanks for:

1. My parent, Mr. Wahyu Nurzam, S.E and Mrs. Reni Pujiastuti, who raise me with love, happiness, knowledge, and always do the best for me. My dear parent, you always own my dedication, thank you everything you've done.
2. My sisters, Aghnia Ilmi Sadida Nurzam, S.E and Hanin Hanifah Nurzam, My childhood has been memorable, all because of a sister who is so lovable.
3. Much obliged for Mr. Asro Nasiri, Drs, M.Kom., Mrs. Eny Nurnilawati, S.E, M.M., and Mrs. Suyatmi, S.E, M.M. Thank you for your help and support during the recent unstable condition.
4. Mr. Emha Taufiq Luthfi, S.T., M.Kom as my supervisor who has guided me all this time and help my bachelor thesis completed.
5. The one who stole my attention, Alfiannisa' Nurkholisotin Ni'mah, may Allah always on your side my lucky charm.
6. All the staff of Innovation Center's director, staff, and student staff, thanks for the time, work experience, motivation, support, and happiness. Thank you for the opportunity that is always given to me so I can continue to study especially in the field of programming.

7. All of Lecturers who have taught me at Amikom University from 2014-2017.
Thank you for the knowledge that has been given to me. Hopefully you are always given health and protection by Allah SWT.
8. All my friends from International Class, Amikom University, and Startup Founders Community, who give their support for me.
9. All my software developers greatest team. Thank you for all of your dedication and hard work. May Allah always bless us.
10. All parties who have been involved either directly or indirectly in the process of completing this thesis which can not be mentioned one by one.

PREFACE

Praise and gratitude to Allah SWT who has given mercy, guidance and strength so that author can finish this undergraduate thesis in accordance with the desired time. Do not forget sholawat and greetings are extended to the esteemed Prophet Muhammad SAW, which has been spreading Islam so that all Muslims can feel the beauty of Islam.

This undergraduate thesis is structured as a graduation requirement for all students at the University of Amikom Yogyakarta. It is also a proof that the student has finished undergraduate level and to obtain a Bachelor's degree in Computer.

With the completion of this undergraduate thesis, the author wants to thank to:

1. Prof. Dr. M. Suyanto, MM. as The Rector of University of Amikom Yogyakarta.
2. Mr. Emha Taufiq Luthfi, S.T., M.Kom as the supervisor who has provided guidance and assistance to author in the working of undergraduate thesis.
3. Author's parents who always provided support and prayers.
4. Mr. and Mrs. Lecturers at University of Amikom Yogyakarta, which has provided knowledge for author lectures.

INTISARI

Saat ini penelitian teknologi di bidang alih bahasa telah merambah hingga pengolahan citra. Salah satu peran pengolahan citra dalam bidang alih bahasa adalah teknologi pengenalan karakter optik pada berbagai perangkat, salah satunya berbasis mobile Android. Namun, saat ini penelitian pengolahan citra di bidang alih bahasa dengan bahasa daerah asli Indonesia sangat sedikit.

Dalam penelitian ini, penulis melakukan implementasi pemindai teks latin dengan Bahasa Indonesia menjadi teks Bahasa Jawa dengan Google Mobile Vision secara real-time dan sebaliknya dengan aplikasi berbasis mobile Android. Dimana Google Mobile Vision merupakan salah satu pustaka optical character recognition yang bersifat open-source dengan metode pattern recognition. Dengan rancangan arsitektur client server maka dikembangkan aplikasi Android sebagai client dan aplikasi Web Service yang dapat mengolah REST API dan berinteraksi dengan database.

Luaran penelitian ini berupa aplikasi alih bahasa yang dapat memindai kata dalam Bahasa Jawa menjadi Bahasa Indonesia, maupun sebaliknya dalam suatu frame aplikasi Android. Dengan penelitian ini diharapkan dapat menjadi benchmark untuk penelitian pengolahan citra untuk bahasa daerah asli Indonesia.

Kata Kunci : Pengenalan Karakter Optik, Mobile Vision, Android, Arsitektur Client Server, REST API

ABSTRACT

Currently technological research in the translating has penetrated to image processing. One of the role of image processing in the translating is optical character recognition technology on various platform, an example on Android mobile. However, the current research on image processing of translating with the native regional language of Indonesia still rarely.

In this research, the writer performs the implementation of Latin text translate from Bahasa Indonesia into Javanese text with Google Mobile Vision in real-time, also vice versa with Android mobile based application. Which is Google Mobile Vision is one of the open-source optical character recognition library with pattern recognition method. With the design of client server architecture, the writer develop Android application as client and Web Service application that can process REST API and interact with the database.

The output of this research is an application for translate that can scan words in Javanese into Bahasa Indonesia, or vice versa in frame of an Android application. With this research, it's expected to be the benchmark for image processing research for native regional language of Indonesia.

Keywords :Optical Character Recognition, Mobile Vision, Android, Client Server Architecture, REST API
